PROFILE

Computer Science undergraduate at Durham University, seeking industry experience to apply and further develop technical skills in a professional environment. Experienced in designing and developing software projects using C#, .NET, Python and SQL, with practical knowledge of backend and full-stack development. Eager to contribute to challenging projects, learn from experienced developers and develop as a software engineer.

EDUCATION

Durham University — **Durham, England**
Computer Science — **BSc 2026 - 2029**

Bede Sixth Form College — **Billingham, England**
Maths, Physics, Computer Science — **2024 - 2026**
Grades: ABA

SKILLS AND INTERESTS / AWARDS AND ACHIEVEMENTS

- **Programming Languages: C#, Typescript, JavaScript, Python, (HTML + CSS)**
- **Databases: SQL Server, (*Entity Framework Core*)**
- **Frameworks: Blazor, ASP.NET Core Web API**
- **Testing: Unit Testing (*xUnit*), Service-layer testing with in-memory databases**
- **Debugging: Serilog, Seq, OpenTelemetery**
- **Tools: Visual studio/Visual studio code, GitHub, Scalar**

Languages: English (native), Persian (intermediate), German (A2)
Interests: Chess, Football, Gym, Coding

- Foundational Certificate in C#, Microsoft Learn
- Silver Certificate in UKMT 2024 and UKMT 2025, top 22% of students
- Bronze Certificate in the British Physics Olympiad and British Astrophysics Olympiad 2025, top 23.8% of students

PROJECTS

All projects are displayed alongside a link to the Github repository here: sav-afg.github.io/

Service Booking Platform, January 2026 – April 2026(Displayed on Github.)
A production-style ASP.NET Core Web Api with Blazor WebAssembly Frontend

- Engineered Dual-token JWT authentication (30-min access / 7-day rotating refresh tokens) with revocation and secure logout
- Enforced claims-based authorization to guarantee booking ownership and role-based access control (Customer, Staff, Admin)
- Introduced time-range conflict detection to prevent overlapping bookings at the service layer
- Architected a layered API using Controller–Service–DTO separation, improving modularity, testability and maintainability
- Authored 92 automated tests (unit + integration) covering authentication flows, token rotation, authorization rules, and booking logic

Fitness Saviour, October 2025 – January 2026 (Displayed on Github.)
A full-stack Blazor Server App

- Full-stack fitness and nutrition web application using C#, ASP.NET Core Blazor, Entity Framework Core, and SQL Server
- Implemented a questionnaire-driven scoring system to generate personalised diet and exercise recommendations based on user input
- Designed and normalised the relational database schema and integrated it using EF Core for persistent progress tracking
- Built a component-based Blazor UI with dynamic state updates and interactive data visualisations to display user progress over time

Discord Moderation and Interaction Bot, January 2026 (Displayed on Github)

- Real-time Discord bot using C#14 and .NET 10 with the Discord.Net API
- Implemented 8 modern slash commands for structured user interaction
- Context-aware message handling based on user input and intent
- Automated raid detection by monitoring user join patterns
- Generated detailed moderation alerts to assist server administrators
- Applied event-driven programming principles and secure configuration practices

VOLUNTARY EXPERIENCE

Middlesbrough, England
April 2025

- **Teamwork:** Collaborated with other volunteers to serve customers and meet their needs
- **Training and Development:** Taught skills on the day and implemented them to a high standard
- **Leadership:** Appointed team leader in a group. Assigned roles and responsibilities to appropriate members to ensure tasks were completed on time
